

JARLTECH 8034

POS-Display for Multiple Purposes

Have you the need for a better point-of-sales customer communication? A product that is easily adjustable, with clearly visible characters, even from a great distance? Then choose from Jarltech 8034 series for your Point-of-Sales!

The 8034 is a Vacuum Fluorescent Display (VFD), where blue lit characters are displayed on a black background. The 8034 uses the common OPOS and the EPSON ESC/POS™ command set and can operate like an EPSON™ display by sharing one RS-232 port with an EPSON POS printer or compatibles. Plug the 8004 to a PC RS-232 port or to a serial EPSON™ POS printer.

Certainly, the display has the Euro symbol integrated and can show 2 lines with 20 alphanumeric characters per line. The pole has an adjustable

height. The display has a swivel capacity of 360° along with 35° forward/backward tilt, and is programmed via the RS-232 port of the PC or POS-System.

Special features such as blinking text, scrolling, smooth fading in or out of characters are easily actualized as well as "intelligent" makros, that for example start displaying a welcome message after a certain period of inactivity.

Power supply for the display is sent via an external socket adaptor or a special slotblend (included in each package) which easily fits into every standard PC housing. Using that slotblend for the internal power supply of the computer, the display is automatically switched on and off with the PC.
