

JARLTECH 8080

Multi-Currency Steel Cash Drawer

Optimize your highly valued counter space with Jarltech's front opening, high security cash drawer 8080. Built as a robust construction and coupled with flexible multi-currency inserts, the drawer will meet your customer's expectations when mounted in a counter or simply standing on it.

The cash drawer has a versatile interface which offers two possible connection: directly to POS printer ports or to PC serial port via the cash drawer opener 8005-1. The plug-ready cable connects to all common parallel or serial POS printers universally (OKI, Epson, Star, Citizen). The printer will send an opening impulse to the drawer when receiving a command code from the software. If there is no POS printer with cash drawer port, our external opener interface box 8005-1 facilitates connection to the RS-232 port of any PC. In the latter set up, a specific command code needs to be sent from the software to the RS-232 port to eject the drawer.

You can count on durability when working with the Jarltech 8080. It's housing is built entirely from

steel with a textured paint finish that withstands heavy use and conceals every day fingermarks and dirt. Ball-bearing reels support a smooth ejection of the drawer and endure the various strenghts of drawer returns by different operators.

Padded black feet grip the drawer firmly to any surface. The drawer features a 3-position security lock: 1. full drawer lock , 2. operation mode and 3. manual opening.

The multi-currency insert is Euro compatible, bearing 5 note slots (with flexible size and rebounding note holder springs), 8 partly adjustable coin scoops and 2 compartment for cheques that can be filled without opening the drawer. Additional insertions for individual operators are available with or without secure lockable lids.

For maximum control during operation, the »drawer-open« microswitch sensor gives immediate feedback to the PC software. For example, when the standard length of time for the drawer to be opened has surpassed or when it is manually opened with the key.
